SUMMARY

Engineer who works with customers directly: understands their problem, demos a working solution, and deploys it to production. Shipped full-stack and AI products for clients across ed-tech, sports-tech and consulting, including a live app serving 1,000+ users and AI pipelines that generated and translated 100+ assessments across 5 languages.

EXPERIENCE

Forward Deployed Engineer — Xntuate Consultancy Services
August 2026 – October 2026 | Remote

- Built an internal AI course-creator tool that generates full courses for any occupation as PPTs in the client's template, and a second tool that translates validated PPTs while keeping formatting intact.
- Built with Next.js, Python/Flask and GCP, using the Google machine translation API for the translation step.

Technical Lead — Rally Sports (international client, via Xntuate)
February 2026 –November| Remote

- Joined as a frontend developer and now lead development of the full app (React Native/Expo, Node, AWS): features, deployment, maintenance and release management. The app serves 1,000+ live users.
- Work directly with the founder on new feature requests: flag edge cases and limitations up front, then plan the most efficient way to implement each feature.

Product & Platform Lead — EmployU (Ed-Tech)
April 2026 – July 2026 | Remote

- Built the full web MVP (MERN + OpenAI API) connecting students, universities, faculty and employers, together with one colleague.
- Spent about half my time customer-facing: gathering client requirements and demoing the platform, then turning feedback into product decisions.

Junior Project Manager / AI Operations Lead — Xntuate Consultancy Services
May 2024 – Jan 2026 | Remote

- Designed and ran an AI assessment generation and translation pipeline (machine translation plus professional proofreading) across 5 languages; it produced and translated 100+ assessments.
- Automated about 80% of the pipeline and cut QA review cycles by 40%.
- Built the pitch demos LearnMate, RecruitMate and AssessMate in close collaboration with Xntuate's head, helping the firm win new client business.

PROJECTS

Jarvis (voice desktop assistant): Runs on the desktop with no paid tools. Takes notes, runs web searches, and opens or searches files and folders, all by voice.

B2B Lead Generation & Outreach Monitor: Scrapes leads based on the business intents you choose, then tracks each lead through its full lifecycle so outreach strategies can be tested and compared.

Enterprise Decision Support System (RAG): Retrieval-Augmented Generation engine for structured document analysis and risk identification, with deterministic output schemas to prevent hallucinations.

AI Course Generator Platform (Learnmate): Generates courses for blue- and white-collar workers.

SKILLS

Languages: JavaScript, Python, SQL, C++

Frameworks: React, React Native, Expo, Node/Express, Next.js, Flask

Cloud & Data: AWS, GCP, MongoDB, MySQL

AI: OpenAI and Anthropic APIs, RAG, prompt engineering, agentic workflows, AI-assisted development

Customer-facing: Requirements gathering, product demos, scoping, stakeholder communication

EDUCATION

B.Tech in Information Technology — Guru Gobind Singh Indraprastha University (MAIT), New Delhi
CGPA 8.07/10 | Expected 2027

ACHIEVEMENTS & EXTRACURRICULARS

- 1st Place, IIITD E-Summit Bidathon 2024 | 3rd Place, CodeWizards Hackathon, SRM Ghaziabad (both national level)
- Photography, Social Media Management, Graphic Design.
